

# A Student-Driven Approach to Assessing Computer Engineering Students' Knowledge of their Degree Program

Undergraduate Research Assistant, Nadeen Saleh  
Principal Investigator, Dr. Lofton Bullard

# Purpose

- ◇ Investigate widespread advising approaches and build upon them by applying a learning management system—Blackboard.
- ◇ Survey computer engineering students to assess their understanding of their degree program.
- ◇ Evaluate common inconsistencies that could guide the allocation of valuable university resources.

# Outline

1. Background
2. Our methodology
3. Results and application
4. Future works

# 1. Advising on the web

- ◇ Early 2000's.
- ◇ Posting vital degree and academic information.
- ◇ Helped students become more active in their degree planning and course selections.
- ◇ We go one step further as to assess how well this information is distributed and absorbed with students.

## 2. Self-assessment of class attendance study

- Students' self-assessment of their class attendance and completion of reading assignments.
- Test of compliance found that development education students' self-reports of their class attendance and completion of reading assignments was an unreliable means to assess actual compliance.
- Our evaluation compares students' responses to the current state of their academic progress illustrated in their DARS audit, our approach can identify inconsistencies in their responses and address them through in-person advising.

### 3. Blackboard

- ◇ Learning management system is used similarly, and uniquely, within universities across the country.
  - ◇ Some activities that have been conducted through Blackboard include;
    - discussion boards for student communication;
    - being a hub for important course documents;
    - and increasing distance learning enrollment as a result of user-friendly interface.
  - ◇ Student-driven input to Blackboard Communities has yet to be applied towards the allocation of departmental resources, such as advising.
- 

# Our process is easy

Distribute surveys  
via Blackboard  
Community

Data  
analysis

Evaluate  
inconsisten-  
cies

A decorative graphic on the left side of the slide consists of a cluster of hexagons in various shades of blue and cyan. Some hexagons contain white icons: a lightbulb, a thumbs-up, a smartphone, a magnifying glass, and a gear. A network of small dots and lines is also visible. A large, central cyan hexagon contains the white number '1'.

1

# Inconsistencies

—a question in which the student answer and audit representation of that answer do not align.

# Evaluation

- ◇ The FAU degree audit reporting system (DARS) serves as an accuracy measurement when compared against student answers.
- ◇ DARS produces a report reflecting academic progress towards completion of an undergraduate degree.
- ◇ A student is able to run an up-to-date DARS at any time.
- ◇ By comparison, we can catch the following errors:
  - (1) A student claims that they have met a requirement that they have not.
  - (2) A student has fulfilled a requirement that they are unaware of having fulfilled.

# Summary

## **Population:**

Nearly 40% of computer engineering students.

## **Hypothesis:**

That most (70%) of computer engineering majors in this study have a firm understanding of their degree requirements.

## **Survey:**

29 true/false questions tests for the meeting of IFP, foreign language, core and elective requirements.

A decorative graphic on the left side of the slide. It features a large central hexagon with a blue-to-teal gradient, containing the white number '2'. Surrounding this central hexagon are several smaller hexagons of varying shades of blue and teal. Some of these smaller hexagons contain white icons: a lightbulb, a thumbs-up, a smartphone, a magnifying glass, and a gear. There is also a network-like icon with a central node and radiating lines, and a speech bubble icon.

2

So how well do  
students know their  
degree program?

As anticipated, the average overall and core scores were both about **95%** in our test population.

“

Over **98%** of students who took part in this study scored an overall score greater than **80%**—our threshold for students having a firm understanding of their degree program.

■ <80% ■ 80-90% ■ 90-95% ■ 95-100%

■ <80% ■ >80%

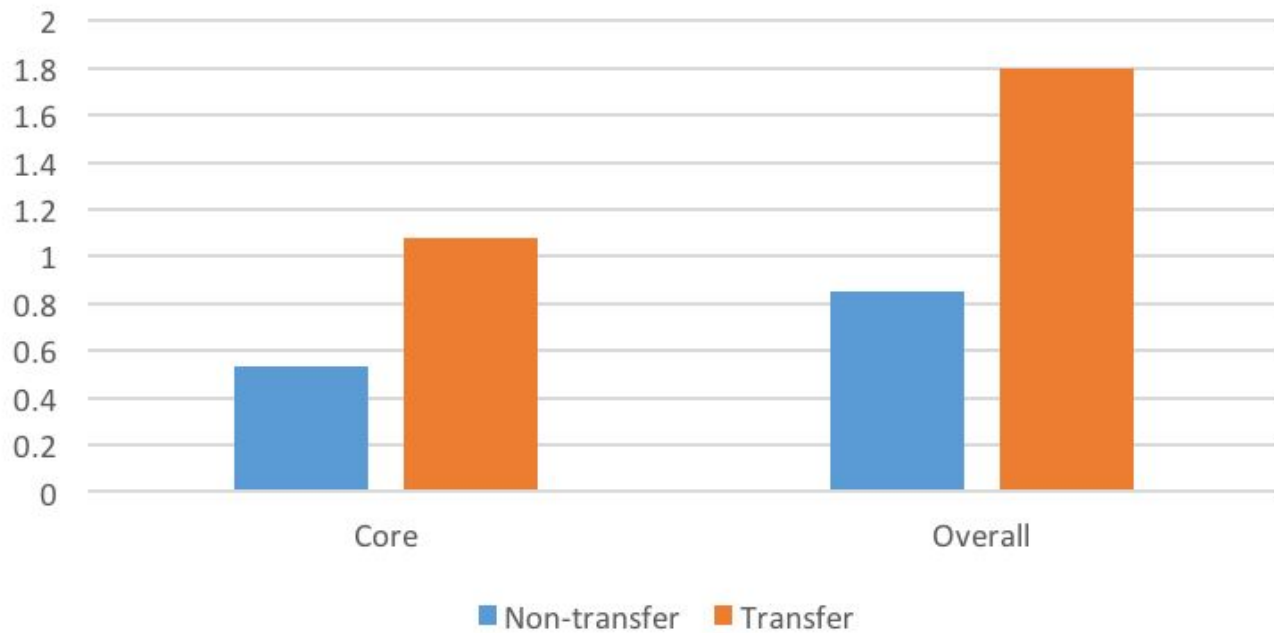

# Great...

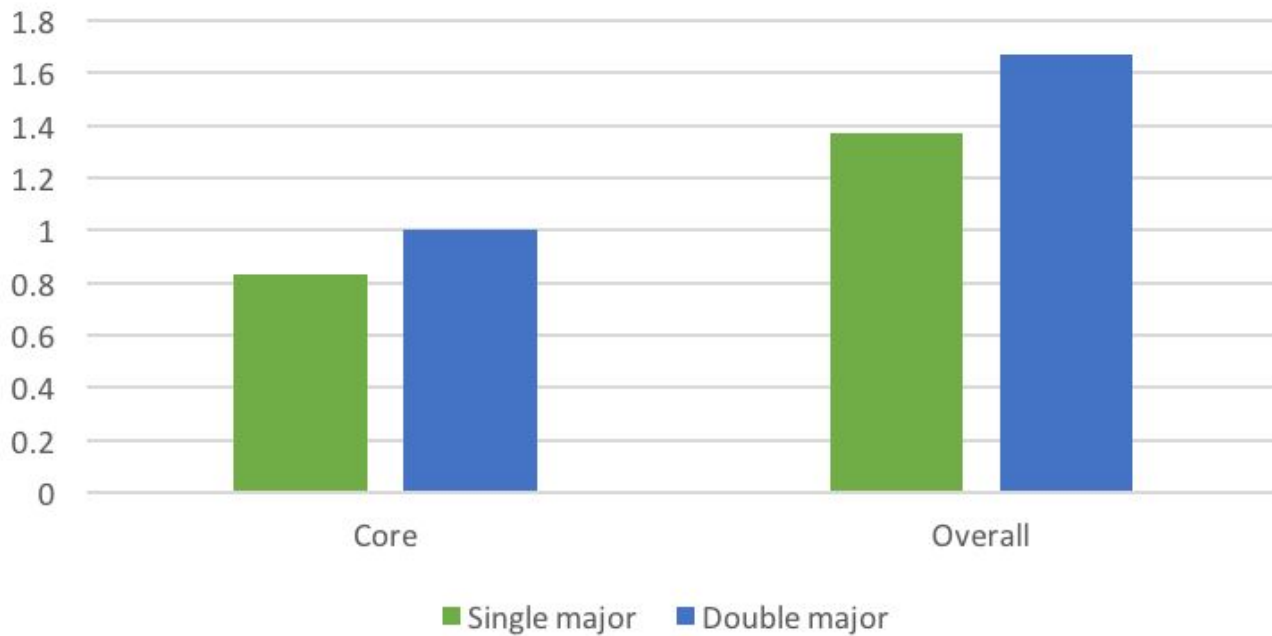

But what does this all mean? It's reassuring for advising services to know their students are well informed, but well informed doesn't mean perfect.

Average inconsistencies by origin

Average inconsistencies by intensity of study

## INCONSISTENCIES BY COURSE

# Conclusion and Application

- ◆ **Students know their degree program.**
- ◆ Students' knowledge is an inexpensive means of assessing their progress in their degree program.
- ◆ By distributing a survey like this on a semester basis, inconsistencies can be noted and addressed before they have potential to setback a student's projected graduation.
- ◆ Allot courses to be offered based on student input.
- ◆ Estimate the cost of completing one's degree program.
